INTRODUCTION

Questions we're answering:

- Managing my health
- Access to Care for Rural and Remote Communities
- Addressing environmental health disparities

Problem Statement: People with chronic conditions are living in rural areas encapsulated by a food desert, leaving them with no access to the nutritious foods that their body needs to stay healthy.

Food Deserts In San Diego County

- In San Diego County, around 1 in 7 residents live in a food desert
- Food deserts are more prevalent throughout Southwest and South Central San Diego County
- Low income areas in the U.S. that contain food deserts are 10 or more miles away from a proper grocery store with nutritious foods

Solution!

We understand that those nutritious foods that your body needs to thrive might be troublesome to get in your area, or maybe life just gets in the way and grocery shopping may be difficult after a long day. With SHARP-Fresh we take care of everything for you, from your diet plan accommodating to your health needs, along with your individual preferences. It's all brought right to the comfort of your own home, no matter where you may be we'll take care of you and your needs.

Our solution to these problems to improve customer experience and health overall is our newly made app called "SHARP-Fresh".

SHARP-Fresh is an app that aims to improve the experience for those with chronic health conditions and those who live in rural areas with food deserts, which limits access to nutritious foods.

SHARP-Fresh curates your diet based on your preferences and your medical information provided by your doctor, which is then sent to a dietician for refinement. After dietician approval, you can shop for the foods you love. Our delivery drivers will pick up your nutritious packages and deliver them to your doorstep.

OUR PROCESS

1) Medical Visit & individual preferences

Patient undergoes health checkup to see what foods are best for their condition and set preferences for their diet plan.

3) Recommended food selection via app

Patient then purchases food recommended by the dietician.

2) Dietician review and finalization

Dietician considers medical information and user preferences to curate a specialized diet.

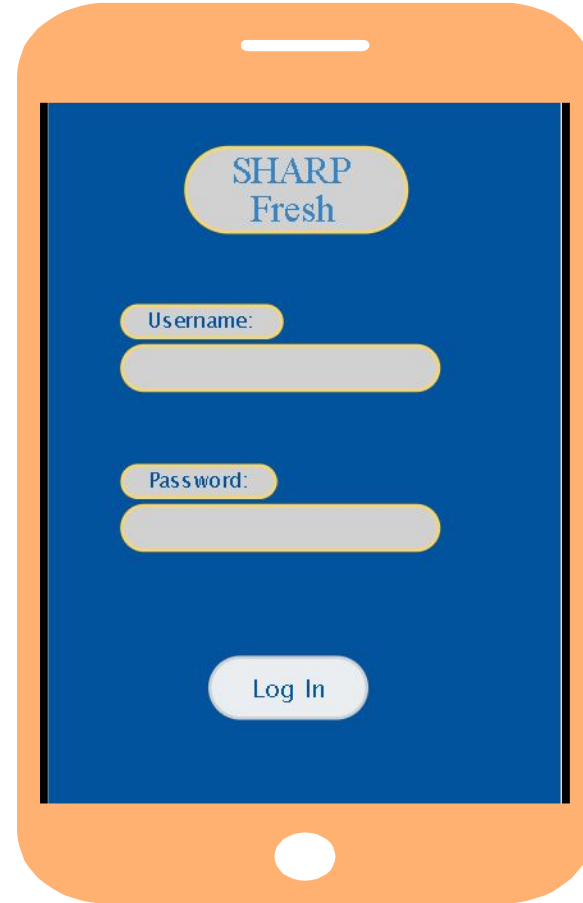

4) Delivery

Our SHARP Delivery drivers will then retrieve your nutritious foods and deliver it straight to your doorstep.

#1

Login Screen

This screen prompts the user with a section to input their login information

#2

Home Screen

This screen prompts the user with a menu allowing them to look at their individual profile, add their personalized selection to cart, then view their checkout list.

#3

Conditions Screen

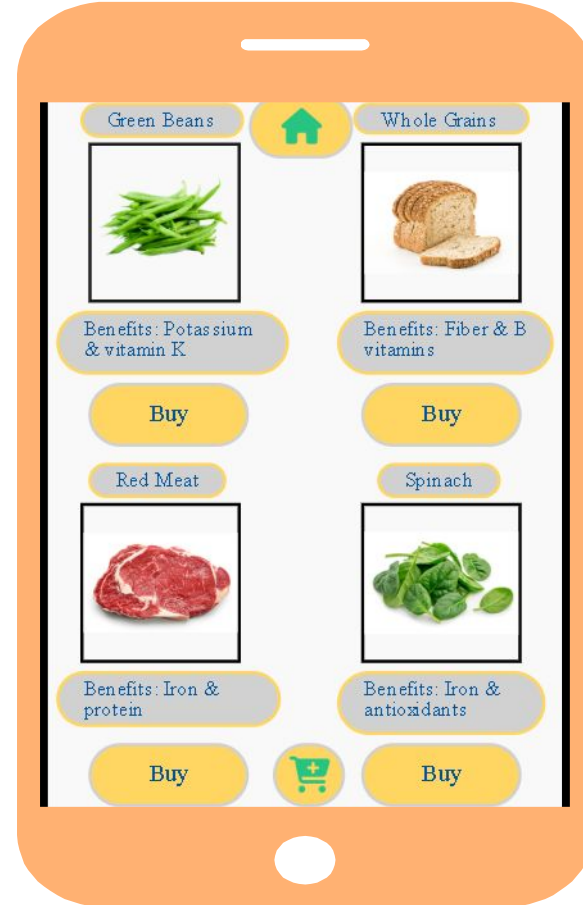

This screen prompts the user with their medical information and a list of beneficial food sources suggested by the review of our dieticians for their individual health needs.

#4

Shopping Screen

This screen prompts the user with a list of foods prescribed by our dieticians along with the health benefit information for each item to keep our patients health at their best.

#5

Checkout Screen

This screen prompts the user with their shopping cart and items to be purchased and sent out for delivery.
